

TokTik by Thanawat

Thanawat as in Thanawin and Nawat. Thanawat is not a real person. He can't hurt you :)

We have the following repos:

- Deployment
- Frontend
- Backend
- Converter
- Chunker
- Thumbnailer
- 2-line Dockerfile crontab

To run the app, please clone the deployment repository. Ensure that you have Kubernetes installed and `kubectl` works. Ensure also that you have access to the private packages. Then, you can run the app on local by simply running the following commands.

```
cd /path/to/cloned/deployment/repo
kubectl apply -f ./k8s
```
